

Fruit, Vegetables & Flowers

Please read the Schedule CAREFULLY and make sure your entry fits the full criteria for the class.

All entries MUST be grown by the person named on the entry form.

VEGETABLES

Potatoes.

Potatoes should be as far as possible of the same shape and size, with eyes that are shallow. They ought to be carefully washed so as not to damage the skins, but with all traces of earth removed. They ought to be of a good size, not too large and not too small (around 170g to 225g is a good guide). The exhibit will be marked down if they are misshaped, damaged by slugs, worm or blight. The presence of green colouring as a result of exposure to light is also defective.

Carrots.

When taken from the soil one should be careful to try and maintain a long tap root. This can be achieved by watering them well and easing them from the soil. The carrots should be carefully washed with a soft cloth to ensure they are free of earth especially around the top of the shoulders. The skins should be undamaged and they should be of similar size and shape - try to keep a long tap root. The leaf stalks should be cut to a length of about 75mm and neatly tied with raffia. They will be marked down if they display damage by carrot root fly grubs and green colouring around the shoulders due to exposure to light.

Onions.

Onions should be uniform in shape and size. Be careful to ensure that they conform to any weight restrictions. The onions should be well ripened, firm and with a dry, unbroken, unblemished and ripe skin. The onions should not be over skinned and green. The roots should be trimmed neatly and the top of the onion (the neck), which ought to be thin, should be turned over and bound neatly with raffia. The onions should be staged on rings so that they sit upright on the show bench. (One can use cardboard tubes from used kitchen roll etc. cut to size)

Runner Beans.

The beans should be exhibited with some stalk (the handle) attached. They should be straight and of equal length and uniform size. They should also be fresh and not coarse and stringy. The seeds should not be overly prominent in the pod (the judge will snap one of your beans when judging to check that they are fresh and not stringy). They should be of a good even colour and free from blemishes.

Tomatoes.

The tomatoes should be regular in shape and size and firm but fully ripe (showing the true colour of the variety). They should be unblemished but not be polished and have a fresh green calyx attached.

Cabbage.

The Cabbage (s) should be of a good size and colour and have a firm solid heart. The leaves as far as possible should be clean and free from slug and caterpillar damage. Make sure there are no slugs or grubs lurking in the foliage. Try to maintain the “waxy bloom” on the leaves which will disappear with excessive washing and handling. The roots should be cut off as can some of the outer leaves (if damaged), but not all, leaving a neat stalk of some 75mm. The cabbage (s) should be fresh. If two are being exhibited they should also be uniform in shape and size.

Beetroot.

When taken from the soil one should be careful to try and maintain a long tap root. This can be achieved by watering them well and easing them from the soil. Carefully trim any side roots from the main tap root leaving just one root. The beetroot should be carefully washed with a soft cloth to ensure they are free earth. The skins should be undamaged and they should be of similar size and shape, as a rule of thumb the ideal size for globe beetroot is that of a tennis ball. The leaf stalks should be cut to a length of about 75mm and neatly tied with raffia. If they are too large and woody they will be marked down. Rubbing them with cooking oil whilst enhancing their appearance is also considered defective.

Courgettes.

Courgettes should be fresh of between 4 to 6 inches in length and of uniform shape and size whilst displaying a good all over skin colour without blemishes. The flowers can be left attached but this is not a must (Check the schedule BEFORE cutting them off). Do not cut the courgettes too close to the fruit as they should have about 2 cms of stalk attached. They should be clean without the need for washing which can be detrimental to their natural appearance. In case of round cultivars they should be around 3.5 to 4 inches in diameter.

Marrow.

Marrows should adhere to size limits and display an even and all over good colour. They should be displayed with at least 2cms of stalk attached. The skin should ideally be unblemished

Cucumber.

The Cucumber should be exhibited with about 2 cms of stalk attached and with the dead flower intact and still attached at the end of the cucumber. The cucumber should be fresh, straight and not over mature. They should have a short “handle” i.e. the thin end to which the stalk is attached. They should be blemish free and retain their natural bloom. Care needs to be exercised when handling them as this can remove the bloom as may washing.

Sweetcorn.

They should be fresh and ripe but not over ripe and starchy. The ears of corn should be even, regular (in line) and fully formed over the whole of the cob. They should be exhibited with at least 2 cms of stalk attached and with the protective leaves (the husk) and dead filaments present. To present the cobs the outer leaves on one side only should be neatly peeled back and tucked under the cob to display a section of the ears of corn.

Shallots.

Shallots should be prepared for exhibition in much the same way as onions. They should however be presented neatly on a plate of clean dry sand.

Parsnips.

The tips for exhibiting parsnips are much the same as those above for carrots. Specimens should be well washed and without blemishes if possible. Some varieties of parsnips are very susceptible to canker which is most unsightly on the show bench, so when purchasing seed it is worth seeking out varieties that show resistance to canker.

Leeks.

Leeks should be thoroughly washed with the soil teased from the roots which should not be cut off. The flags (leaves) should also not be cut and in good condition. The barrel of the leak should be straight, even and not swollen (bulbous) at the base. The longer the blanched (white) part of the barrel the better. The leeks

should be uniform in shape and size. It is advisable to tie the flags loosely with strands of raffia in two or three places along their length.

FRUIT

Apples and Pears.

Apples and Pears should be exhibited with stalks attached. The fruit should not be polished. Fruit should be uniform in shape and size with skins free from blemishes, patches of discoloration and bruising etc. Specimens should also be fresh. Ripeness of fruit is not so important.

FLOWERS

Generally speaking, flowers and foliage should all be clean and free from disease and insect damage. Where possible choose vases to suit the height of the stems.

Flowers should be almost fully open unless specified otherwise.

Remove the thorns from lower portion of the stems on roses.

Remove any greenery/leaves that will sit in the water.
